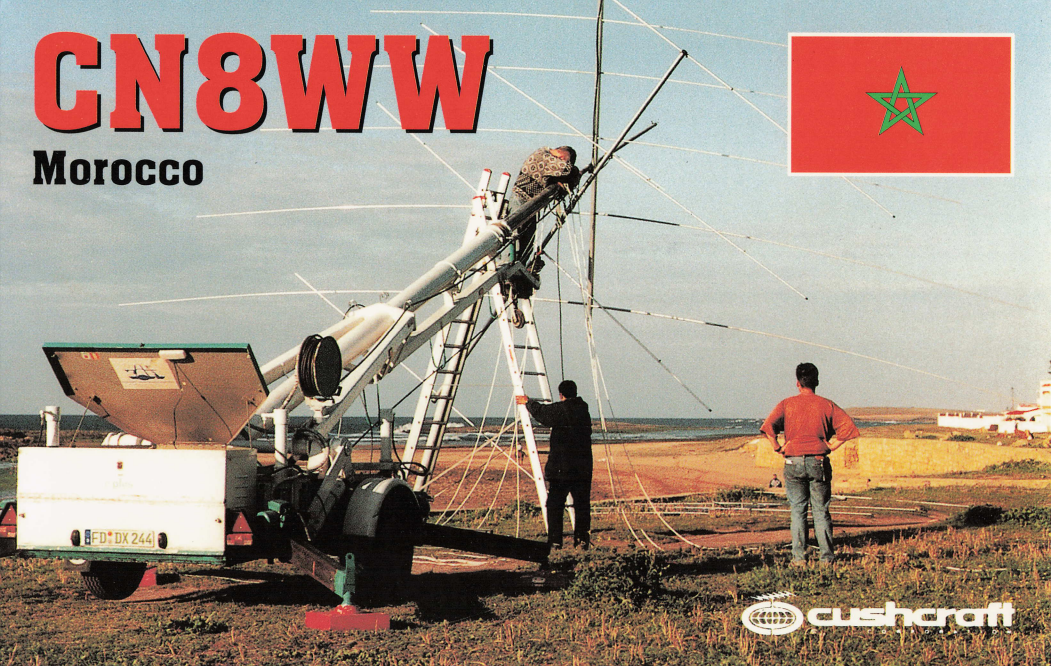
CN8WW

Morocco



CN8WW was operated by DL6FBL before, during and after some contests in 1998 and 1999. For the 1999 CQ WPX SSB, Ben was assisted by DJ9MH (Hajo) and DL1MFL (Markus). DJ9RR (Heye) was the 2nd OP before the '99 CQ WPX CW. All single-op work was done from CN8MC, the Club Station of ARRAM (Association Royale des Radio Amateurs du Maroc) in Rabat, the capital of Morocco. The multi-operation resulted in a new world record and took place from a beach location not far away from Rabat. The overall-log shows 52,000 QSOs. TS850S, IC775DSP, Heath- and Ameritron-PAs with single-band 4-elementers and verticals for the low-bands gave a lot of fun. The BIGLIFT shown on the photo was the reason to make a long-distance motorway-tour through southern Europe.

Our sincere thanks to Kacem (CN8LR) and the entire CN8MC crew for their support. Without their kind help these operations wouldn't have been possible. Thanks also to CUSHCRAFT for antenna sponsoring.
We plan to participate in further contests. Please call us again under this or another CN-call!
